

Dear Jessica, Dee, and Darline,

I wanted to send you this letter thanking you for recommending O2PRIME to Deaconess Hospital.

Our hospital daycare where we did a pre and post indoor air quality test; as you know I cannot divulge the readings of what was found in the pre-test but the post-test really took me by surprise. I could not believe the post-test readings came back as negligible—meaning the findings in the pre-test could no longer be read not even a minute amount!

As you know we also had concerns with helicopter smells coming into the hospital, especially in the Human Resources Department where we had a few pregnant ladies that were getting sick from the smells. Your team installed O2PRIME and within just a few hours the smell was gone and the complaints subsided. As you said, the key is to keep the fans running and the brushes/needles clean on the IBARS to ensure the product works at maximum efficiency.

To me this product definitely works and as you know I am thinking of specifying it in my new facilities. I really appreciate you working with the engineers on the projects to help them understand O2PRIME and how it can make a difference in nosocomial infections and other problems such as mold, pollen, allergies, and formaldehydes.

Thank you again!
